

Contact:

1) What do you expect to be different in terms of our response if/when we contact extra-terrestrial life?

2) In your chapter 10 analysis globalism is a big topic.

Is it fair that those who made contact are responsible for also presenting humanity to the rest of the universe?

(those who oversee making contact might have an agenda that does not benefit the entire human race)

3) Does Hadden's wealth and power enable him to act the way he does as described in your chapter 5 summary? Does that apply to anyone in the real world?

Incredibles:

1) Obviously, the film is a work of fiction and made for children but is there any basis on the "future" technologies shown in the film?

2) Is there an ethical framework in which Syndrome is the moral being?

3) Is it fair that superheroes can live two lives, do whatever they please in their costume and then pretend like they didn't just destroy 5 buildings?

Black Mirror: White Christmas:

1) Is it fair that everyone around you, even strangers, know you have committed a crime?

2) Is there any research being done that could lead to a technology like z-eyes in real life?

3) Is it fair that you do not get a choice in this technology and it is implanted at birth?

Transformers:

- 1) Do you have any examples of similar attacks that you talk about in your Computer and Network Security, like the Qatar base or the Pentagon?
- 2) Wasn't it ultimately a good thing that the government kept the information of the all-spark and the transformers in general from the public?
- 3) Is anyone looking into a transformers type technology? Obviously not an exact replica but maybe something close with possible military application?
